

Career Recommendation System

ABSTRACT

In today's evolving world there are a plethora of career paths for students to choose from. This makes them confused. To overcome this issue, we are building a career recommendation website.

Problem Solving Approach

Our aim is to create a full stack web application which provides career recommendation based on naive-bayes algorithm. The user will fillup a form related to their skills and preferences and the system will recommend an optimal career path.

Tools & Technologies

- Figma
- React Js
- MongoDB
- Jupyter Notebook
- Express
- Mern
- Node Js

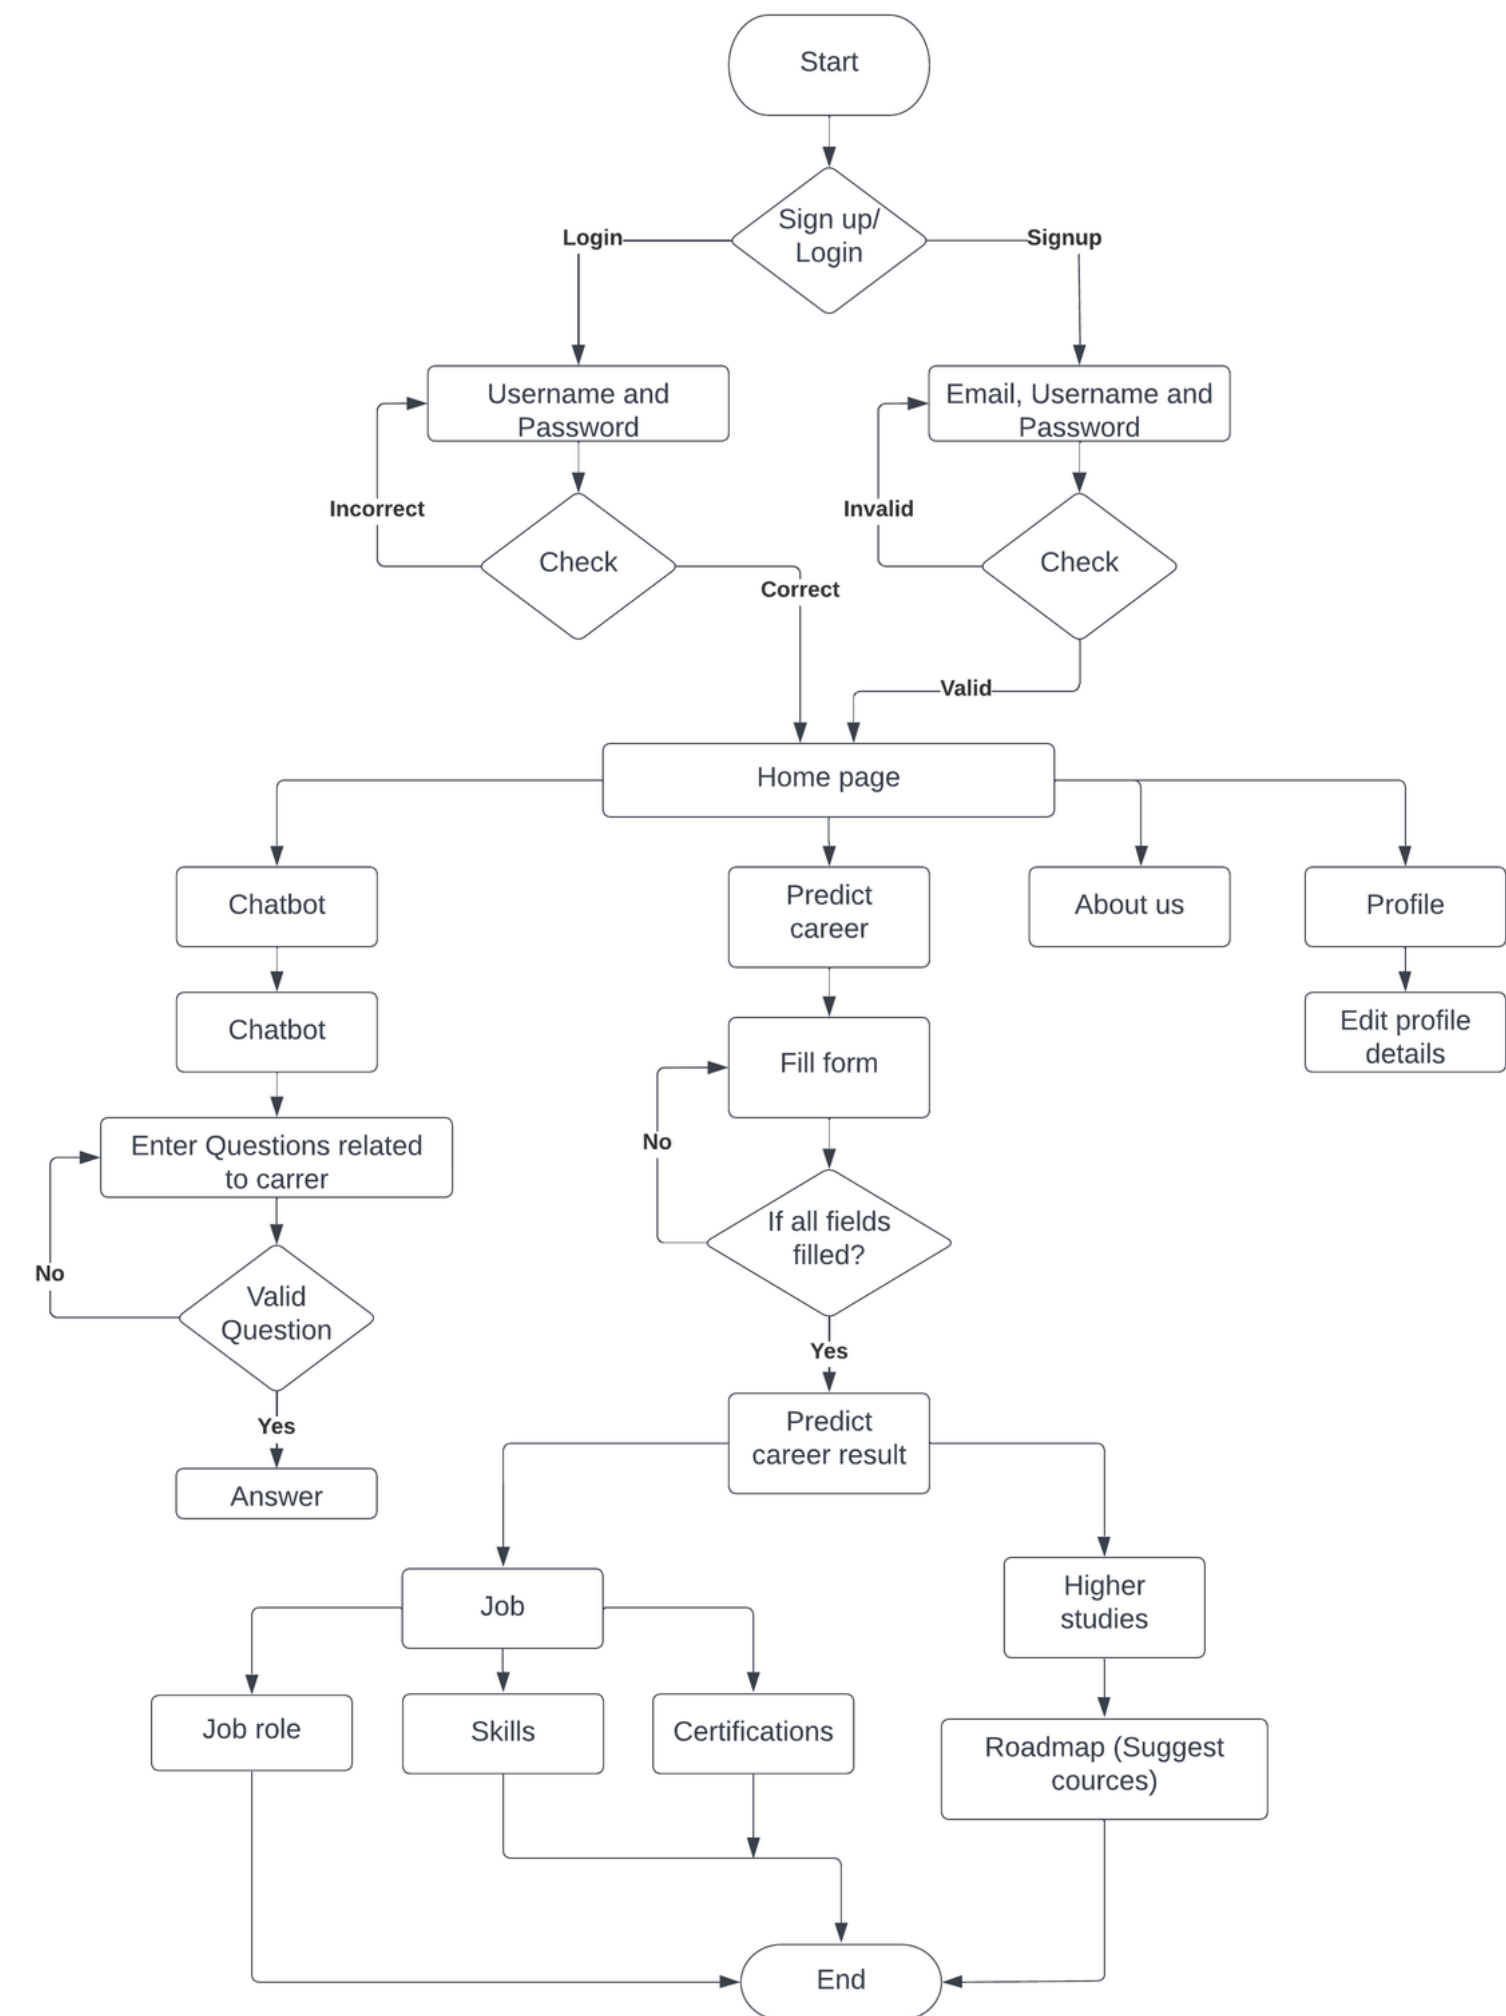

LIMITATIONS

Presently we have a limited dataset.
Hard to compete with word of mouth recommendations.

FUTURE ENHANCEMENTS

Udemy course recommendations
Improved recommendations based on user feedback
Career Roadmap
Chatbot
